ABOUT

Motivated and detail-oriented Computer Science Engineering graduate with a strong foundation in Java, SQL, web development, database management, and basic machine learning concepts. Skilled in problem-solving, programming, Prompt Engineering, and Generative AI concepts, with hands-on experience in developing academic and web-based projects using modern technologies. Familiar with frontend and backend development, secure coding practices, and real-time application deployment. A quick learner with strong analytical and communication skills, eager to begin a career as a Software Developer or AI-focused professional and contribute to organizational growth while continuously enhancing technical expertise.

EDUCATION

Bachelor of Technology (B.Tech) Computer Science (IoT)

Raghu Engineering College, Dakamarri,
Visakhapatnam

Nov 2022 – Apr 2026

CGPA: 7.3

Intermediate (MPC)

Narayana Junior College, Gajuwaka,
Visakhapatnam

June 2019 – May 2021

Percentage: 68%

CERTIFICATIONS

- **Problem Solving through Programming in C (NPTEL):** Learned programming fundamentals, logical problem-solving, and implementation of algorithms using C language.
- **Programming in Java (NPTEL):** Gained knowledge of object-oriented programming concepts, Java fundamentals, exception handling, and collections framework.
- **SQL (Basic):** Acquired skills in writing SQL queries, managing databases, and performing data retrieval and manipulation operations.

PROJECTS

Automatic Dual-Gate Railway Crossing with Object Detection and Authority Alert

- Designed an IoT-based railway gate automation system using ESP32, IR sensors, and servo motors.
- Engineered AI-based object detection using ESP32-CAM, Python, and OpenCV for obstacle detection.
- Integrated GSM, GPS, and a web dashboard for real-time monitoring and emergency alerts.

Attendance Buddy – Web-Based Attendance Management System

- Created a responsive web-based Attendance Management System to manage student records efficiently.
- Developed secure authentication and structured database management for data handling.
- Deployed the application on Vercel for real-time accessibility and scalability.

Disease Prediction

- Developed a machine learning-based web application to predict 5 diseases using trained classification models.
- Integrated ML models with a Streamlit interface featuring dynamic input forms.
- Implemented data preprocessing and model integration to generate real-time prediction results.

Spam Email Classifier

- Built a machine learning-based spam email classifier using TF-IDF and Naive Bayes algorithms.
- Collected and processed email/SMS datasets labeled as spam and non-spam messages.
- Applied text preprocessing techniques such as tokenization and stopwords removal for feature extraction.
- Evaluated model performance using accuracy, precision, and recall metrics for effective spam detection.

SKILLS

Technical Skills

Java, C++, C, SQL, HTML, CSS, JavaScript

Soft Skills

Skilled in problem-solving, programming, prompt engineering, and generative AI concepts.

ADDITIONAL INFORMATION

Extracurricular Activities:

- NSS Volunteer
- Participated in inter-college coding challenges
- Organized IoT workshops at Raghu Engineering College
